

Jiaxing Top Chemical CO.,Ltd.  
拓海化工

*Quality is our TOP priority*

Leading Manufacturer of Polyurethanes,  
Water Repellants and Textile Chemicals

Polyurethanes for Technical Textiles and  
Synthetic leather

Water-repellants for various applications

# ABOUT TOP

## Company Profile: JIAXING TOP CHEMICAL CO., LTD.

### ### Overview

**JIAXING TOP CHEMICAL CO. LTD.**, headquartered in Jiaxing, Zhejiang Province, China, is a leading enterprise specializing in the research, production, and international trade of fine chemicals. Our company is dedicated to providing high-quality chemical products and first-class services to customers worldwide. Our product range includes pharmaceutical intermediates, pesticide intermediates, dye intermediates, electronic chemicals, and other fine chemicals.

### ### Development and Strategy

Since its establishment, **JIAXING TOP CHEMICAL** has adhered to the business philosophy of "innovation-driven, quality-oriented, and customer-first." We have built advanced R&D laboratories and production facilities and established long-term partnerships with several renowned universities and research institutions at home and abroad. This ensures that we stay at the forefront of technology innovation and product development.

To meet the demands of the international market, **JIAXING TOP CHEMICAL** actively expands its global business. Our products are exported to North America, Europe, Southeast Asia, the Middle East, and many other countries and regions. The company has gained wide recognition and praise in the international market, becoming a long-term partner of many well-known international enterprises.

### ### Core Competencies

1. **\*Technological Innovation\***: We have a highly skilled R&D team continuously driving the development of new products and optimizing existing ones, aiming to provide innovative and efficient chemical solutions for our customers.
2. **\*Quality Control\***: **JIAXING TOP CHEMICAL** strictly implements the ISO9001 quality management system. We are equipped with advanced testing equipment and comprehensive quality control processes, ensuring stable and reliable product quality at every stage, from raw material procurement to finished product delivery.

# QUALITY CONTROL

# OFFICE AND PRODUCTION

# PLANT AND MACHINERY

# POLYURETHANES

Polyurethanes (PUs) are extraordinary and versatile polymeric materials having exceptionally balanced properties such as excellent flexibility, elasticity, a wide range of hardness, good tear strength, good abrasion resistance and good chemical resistance.

PUs have a variety of textile applications such as coated, laminated fabrics and widely used in synthetic leather Industries as adhesives and coatings.

Textiles made with polyurethane: innovation and versatility

Polyurethane is a very versatile material, present in many objects in our daily lives due to the great elasticity of its fibers, is widely used to make fabrics that facilitate freedom of movement and provide great comfort. It is especially suitable for sportswear and swimwear, but also for technical textiles such as medical ones, those used in furniture upholstery, automotive industry & footwear.

Innovation in sportswear and footwear

If the performance of polyurethane for textiles stands out in one area, it is sports. Moreover, due to their extraordinary lightness, elasticity and resistance, provides waterproofing, breathability, maximum traction and durability

Polyurethane also in lingerie and underwear

Comfort and breathability are essential features for underwear. The polyurethane also provides a soft touch, lightness and highlights the figure by adapting to the body perfectly.

Polyurethane accessories as an alternative to leather

Polyurethane bags are a vegan and sustainable option - made up of a recyclable and reusable material - flexible and pleasant to the touch. It thus becomes a real alternative to leather and animal skin

In addition to polyurethane systems for construction and industry, we offer polyurethane for the split leather industry, which can apply its advantages to belts or leather goods.

Protection in safety and industrial clothing

Polyurethane is also an extremely resistant material, to the point that it is used for the protection elements of motorcycling riders. Helmets, knee pads, gloves, shoulder pads, its lightness, flexibility and rigidity make polyurethane an effective material to reduce impacts and friction.

It is also an essential in technical textiles and work clothes. Personal protection equipment in the chemical, metallurgical, nuclear or mining industry gains resistance, reinforcement, lightness, insulation, flexibility, absorption, as well as protection against extreme temperatures, radiation or physical and chemical aggressions.

# WATER REPELLENT

Water Repellent is a processing agent that covers the surface of fiber by nanoparticle compound and gives the fabric excellent water repellency. It also provides washing durability.

The advantage of this finishing is that it can keep the original hand of fabric itself without losing air permeability since it is not coating finish covering the fabric completely with thick resins.

Water repellent technologies have evolved a great extent since being introduced to the textile industry. The basis of achieving water repellent property to textiles is 'hydrophobicity', which means 'fear of water' or 'lack of affinity for water'. Water repellency is achieved by lowering the surface energy of the fabric so that water will "bead" on the surface and won't "wet out" the fabric (or garment).

Water repellent is often used for the final goods; Outdoor garments, Suit, Coat, Umbrella, Carpet, Surgical gown, Automotive engine filter, etc....

## C8 Series - C8 Water & Oil repellent agent

Item name	Structure type	Ionicity	pH Value	Solid Content	Characteristics & Performance	Usage and application
TC-490A	Acrylic-based	Cationic	2-5	32±1	The fabric has good versatility & stable performance, Anti-sticking properties with the calendaring roller, cost-effective	Single Fabric waterproof treatment
TC-4916	Acrylic-based	Weak Cationic	2-5	32±1	Good stability, excellent compounding performance and good sustainability	Single Fabric waterproof treatment
TC-851B	Acrylic-based	Cationic	2-5	30±1	The fabric has good versatility	Triple repellency, Water, oil & dirt three-proof treatment
TC-851pro	Acrylic-based	Cationic	2-5	30±1	Super water-repellency and oil-proof performance	High-performance triple repellency Water, oil & dirt, three-proof treatment
TC-850F	Acrylic-based	Non-ionic	2-5	30±1	Excellent low temperature performance, suitable for bleaching or whitening fabrics	three-proof treatment, anionic additive co-bath treatment, etc.
TC-821W	Acrylic-based	Cationic	2-5	30±1	Excellent wash resistance and high peeling strength	High-Washable, High-performance double repellency, Water & oil, three-proof treatment

# WATER REPELLENT

## C6 Series - C6 Water & Oil repellent agent

Item name	Structure type	Ionicity	pH Value	Solid Content	Characteristics & Performance	Usage and application
TC-610	Acrylic-based	Cationic	2-5	30±1	The fabric has good versatility & stable performance & cost-effective	Single Fabric waterproof treatment
TC-650	Acrylic-based	Cationic	2-5	32±1	The fabric has good versatility, Water & oil resistance	double repellency Water & oil
TC-621W	Acrylic-based	Cationic	2-5	30±1	The fabric has good versatility & Excellent wash resistance	Excellent wash resistance Excellent wash resistance double repellency -Water & oil

## C0 Series - C0 Fluorine-Free Water repellent agent

Item name	Structure type	Ionicity	pH Value	Solid Content	Characteristics & Performance	Usage and application
TC-03A	Acrylic-based	Cationic	2-5	30±1	The fabric has good versatility and excellent initial performance	Single Fabric waterproof treatment
TC-03F	Acrylic-based	Cationic	2-5	32±1	Good stability, excellent compounding performance and good sustainability	Single Fabric waterproof treatment
TC-05P	Polyurethane	Cationic	2-5	30±1	The fabric has good versatility & Excellent wash resistance	Fabric and leather waterproof treatment
